

SQL Project Proposal

<https://github.com/TechK0/sql-project>

The proposal should consist of 1 page (double spaced, 12 point Times New Roman font)

describing the following points:

- Why did you select the job?

The job that I chose is a Game Data Analyst at Amazon. I have always had a passion for games as a kid and at my core that hasn't left me. As a teen I would always login to Twitch TV, one of the largest interactive live streaming platforms, to watch my favorite streamers as well as watching the games I loved playing. With Amazon owning Twitch, there is a great opportunity to take the skills I have learned in class and experiment with analysis on the Twitch platform.

Thousands of people interact with the Twitch platform daily and finding insights on games and find solutions to modern gaming challenges.

- The problem you plan to solve

Explore how new rising games have a correlation to twitch popularity

Do analysis on games with twitch drops vs without drops

Amazon Prime drops and loot and if they have an effects on games

- How you plan to solve the problem

Twitch Web scraping and analysis
